PARMAR RAILWAY

COMPLETE GK PYQ BATCH

GENERAL KNOWLEDGE

(GEOGRAPHY)

LECTURE-3

(BY- PARMAR SIR)

PHYSICAL GEOGRAPHY | INDIA GEOGRAPHY | WORLD GEOGRAPHY | ENVIRONMENT GEOGRAPHY | MAPPING CONCEPTS

- **The Indian River System is divided into two parts: Himalayan River System and Peninsular River System.**
  - **The Himalayan rivers are "Antecedent" rivers (Poorvavarti).** This means their flow was not obstructed by the upheaval of the Himalayas; they existed before the Himalayas formed and cut through the mountains to maintain their course. **Examples**: Indus, Sutlej, Kosi.

The Himalayan rivers	The Peninsular river
1. Most of Himalayan rivers are Perennial.	1. Large number of the Peninsular rivers are seasonal/ephemeral, as their flow is dependent on rainfall.
2. They have water throughout the year because their source is glaciers.	2. During the dry season, even the large rivers have reduced flow of water in their channels.
3. The Himalayan rivers have long courses from their source to the sea.	3. They have shorter and shallower courses.
5. **Example**: The Indus river, the Brahmaputra, the Ganga.	5. **Example**: Narmada, Tapi, Godavari.

Q1.Which of the following three river systems are primarily responsible for the formation of the Northern Plains of India?

NTPC Graduation CBT-01 2025-26 (25 Mar, 2026 Shift 3)

A. Mahanadi, Ganga, Brahmaputra
B. Krishna, Godavari, Yamuna
C. Indus, Ganga, Brahmaputra
D. Narmada, Tapti, Kaveri

- The **Northern Plains are created by the deposition of sediments by Himalayan rivers.**
- **Bhabar**: The rivers deposit large stones here. It is a narrow belt of 8 to 16 km width where river streams disappear.
- **Terai**: A marshy, swampy area where the streams reappear. It has lush green vegetation and forests.
- **Alluvial Flood Plains**: Divided into Khadar (New Alluvium) and Bhangar (Old Alluvium). Khadar is better for cultivation.
- **The total length of the Northern Plains is 3200 km, but in India, it is 2400 km.**

Q2.Select the right bank tributary of the Indus River system.

RRB NTPC UG CBT-01 2024 (04 Sept, 2025 Shift 1)

A. Jhelum River
B. Ravi River
C. Kabul River
D. Chenab River

- **Indus river originates from Bokhar Chu glacier near Mount Kailash** / Mansarovar Lake in Tibet, where it is known as "Singi Khamban" (Lion's mouth).
- Sutlej and Brahmaputra rivers also originate near Mansarovar.
- **Left Bank Tributaries (join from below):** Zanskar, Jhelum, Chenab, Ravi, Beas, Sutlej (collectively known as Panchnad).
- **Right Bank Tributaries (join from above):** Shyok, Gilgit, Swat, Kabul, Tochi, Gomal.

Q3.Which river in Jammu and Kashmir has the world's highest railway bridge built over it?

RRB NTPC UG CBT-01 2024 (11 Aug, 2025 Shift 3)

A. Jhelum
B. Chenab
C. Ravi
D. Beas

- The Chenab River bridge has a height of **359 meters.**
  - It is **part of the Srinagar-Baramulla rail link project.**
- **Dams on Chenab River:** Baglihar, Dul Hasti, and Salal.
- **Dams on Jhelum River:** Tulbul and Kishanganga. (Trick: Kishan pushed the Bulbul into Jhelum).
- **Dams on Beas River:** Pong Dam.

Q4.Which river rises in the Gangotri glacier near Gaumukh (3,900 m) in the Uttarkashi district?

RRB NTPC UG CBT-01 2024 (01 Sept, 2025 Shift 2)

A. Chenab river
B. Yamuna river
C. Bhagirathi river
D. Son river

- **Alaknanda River:** Originates from **Satopanth Glacier** in Badrinath. It is the main river into which other rivers merge to form the Panch Prayag.
- **Mandakini River:** Originates from **Chorabari Glacier** in Kedarnath.
- **Bhagirathi River:** Originates from **Gangotri Glacier** (Gaumukh).

- **<u>The Panch Prayag (Trick to remember: DV, PK, MR, ND, BD):</u>**
  - **Vishnuprayag (DV):** Dhauliganga meets Alaknanda.
  - **Nandaprayag (ND):** Nandakini meets Alaknanda.
  - **Karnaprayag (PK):** Pindar river meets Alaknanda.
  - **Rudraprayag (MR):** Mandakini meets Alaknanda.
  - **Devprayag (BD):** Bhagirathi meets Alaknanda. Here, the river officially becomes the Ganga.
- **Yamuna originates from Yamunotri Glacier** (Banderpunch range) and joins Ganga at Prayagraj (Triveni Sangam).

Q5.Which of the following river basins supports the highest population concentration in India?

RRB NTPC Graduation CBT-01 2024 (23 Jun, 2025 Shift 1)

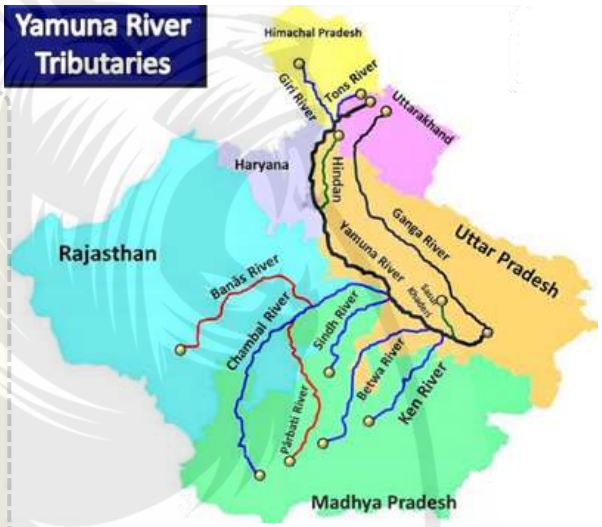

A. Ganga Basin
B. Godavari Basin
C. Brahmaputra Basin
D. Narmada Basin

- The **Ganga basin covering areas like** UP, Bihar, and West Bengal has the highest population density (number of people per square kilometer).

Q6.Which of the following is a tributary of the Yamuna river?

RRB NTPC Graduation CBT-01 2024 (18 Jun, 2025 Shift 2)

A. Son
B. Teesta
C. Gomti
D. Tons

- **<u>Yamuna is the longest tributary of the Ganga and meets it at Prayagraj (Triveni Sangam).</u>**
  - **Right Bank Tributaries of Yamuna** (from below): Chambal, Sind, Betwa, Ken.
  - **Left Bank Tributaries of Yamuna** (from above): Tons (joins in Uttarakhand) and Hindon (joins near Noida).
- Son is a right bank tributary of the Ganga (joins in Bihar).
- Teesta is a tributary of the Brahmaputra.
- Gomti is a tributary of the Ganga.

Q7. Which river system is known for forming gorges in the Himalayan region?

RRB NTPC Graduation CBT-01 2024 (17 Jun, 2025 Shift 3)

A. Godavari
B. Tapti
C. Penner
D. Brahmaputra

- **<u>Brahmaputra's Course and Names:</u>**
  - Originates from **Chemayungdung / Angsi glacier.**
  - In Tibet, it is known as Tsangpo or **Yarlung Tsangpo.**
  - Takes a **U-turn at Namcha Barwa.** (**China is building the Three Gorges Dam, the world's largest, here**).
  - Enters Arunachal Pradesh where it is called **Siang initially, and later Dihang.**
  - Enters Assam where it gets the name **Brahmaputra**.
  - At Dhubri, it takes a southward turn into Bangladesh, where it is called **Jamuna**.
- **Tributaries of Brahmaputra:**
  - **Left Bank:** Lohit, Dhansiri.
  - **Right Bank:** Subansiri, Manas, Kameng, Teesta, Jaldhaka, Raidak.
- **Teesta originates from Sikkim.** (**Guru Dongmar lake is located in Sikkim**).

- **Ganga's Course into Bangladesh:**
  - **Ganga splits at Farakka.** One distributary is Hooghly (which flows in West Bengal).
  - The main branch enters Bangladesh and is called Padma.
  - When Padma and Jamuna (Brahmaputra) meet, they form the **Meghna**.

- **Note**: **Farakka Agreement** between India and Bangladesh happened in 1996 & Farakka barrage in 1975.

Q8.Which of the following rivers forms the Majuli Island, the world's largest river island?

RRB NTPC Graduation CBT-01 2024 (13 Jun, 2025 Shift 3)

A. Mahanadi
B. Godavari
C. Brahmaputra
D. Ganga

- **Majuli is the largest river island in the world.**
  - It is located in the Brahmaputra River in the state of Assam.

Q9.The Pin River constitutes the most important right bank tributary of _____.

NTPC UG CBT-01 2025-26 (16 Jun, 2026 (12:45 PM - 2:15 PM)

A. Chandra River
B. Spiti River
C. Bhaga River
D. Tsarab River

- **Pin river** is a tributary of the Spiti river (Pin Valley National Park is in Himachal Pradesh).
- **Spiti river itself is a tributary of the Sutlej river.**
- Chandra and Bhaga rivers meet at Tandi in Himachal Pradesh to form the **Chandrabhaga / Chenab river.**

- **Passes related to rivers/locations:**
  - **Rohtang Pass connects Manali to Lahaul & Spiti.** Ravi and Beas rivers originate here.
  - **Atal Tunnel** (9.02 km length) is built in the Eastern Pir Panjal range (Dhauladhar range in HP) to avoid the Rohtang Pass.
  - **Bara-lacha la Pass:** Chenab river originates here. Use this pass to go to Leh.
  - **Zoji La Pass** connects Kashmir to Leh.
  - **Burzil Pass** connects Kashmir to POK.
  - **Banihal / Pir Panjal Pass** connects Kashmir back down to Jammu.

Q10.Which of the following is a hydroelectric power plant located on a Himalayan river?

NTPC UG CBT-01 2025-26 (16 Jun, 2026 (12:45 PM - 2:15 PM)

A. Srisailam Hydroelectric Power Plant
B. Krishnarajasagar Hydroelectric Power Plant
C. Mettur Hydroelectric Power Plant
D. Tehri Dam and Hydroelectric Power Plant

- **A dam / multipurpose project** stores gravitational potential energy, converts it to kinetic energy, which turns turbines to create electrical energy.

- **Tehri Dam:** Built on the Bhagirathi river. It is the highest dam (earthen dam) in India.
- **Bhakra Nangal Dam:** The highest gravity dam and the largest dam overall in India.

- **Srisailam and Nagarjuna Sagar Dams:** Located on the Krishna river (Peninsular).
- **Mettur and Krishnaraja Sagara Dams:** Located on the Cauvery river (Peninsular).
- **Hirakud Dam:** The longest dam in India, located on the Mahanadi river in the Sambalpur district of Odisha.

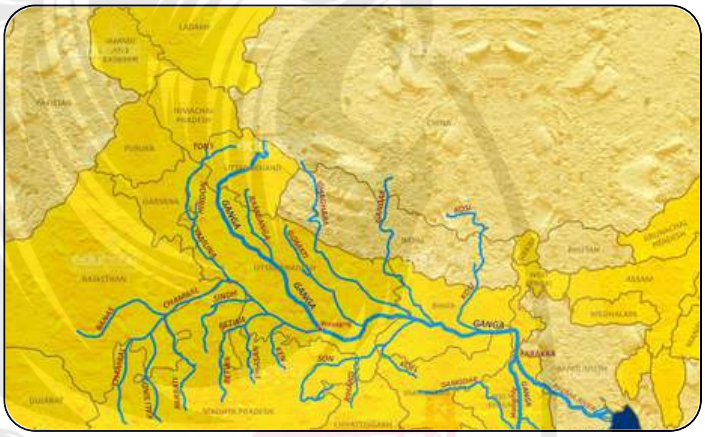

Q11. The river Kosi frequently shifts its channel in the plains mainly because:

NTPC UG CBT-01 2025-26 (13 Jun, 2026 (12:45 PM - 2:15 PM)

A. Its flow is sustained only by seasonal monsoon rain
B. Large upstream dams constantly modify their natural flow
C. It traverses a long stretch of tectonic rifted lowland
D. It carries huge quantities of sediment from the Himalayas

- **Kosi** is known as the **"Sorrow of Bihar"** because it shifts its channel and causes floods.

- **Ganga's Left Bank Tributaries (from top):** Ramganga, Gomti, Ghaghara, Gandak, Kosi.
  - **Ramganga**: Originates from Dudhatoli ranges, Pauri Garhwal (Uttarakhand).
  - **Gomti**: Originates from Fulhar Lake.
  - **Ghaghara**: Originates from Mapchachungo glacier. Its tributary is Kali (Mahakali). Kali's tributary is Goriganga (originates from Milam glacier).

  - **Gandak**: Originates from Nubine Himal glacier near the Nepal-Tibet border.
  - **Kosi**: Arun Kosi and Sun Kosi are its tributaries.
- **Ganga's Right Bank Tributaries:** Yamuna, Son (originates from Amarkantak), Punpun.

Q12.On which river in India (Assam) is the National Waterway 57 (NW-57) developed?

NTPC Graduation CBT-01 2025-26 (16 Mar, 2026 Shift 2)

A. Zuari River
B. Kopili River
C. Kali River
D. Gandak River

- **NW-1 (Longest):** Ganga-Bhagirathi-Hooghly system. From Prayagraj to Haldia. Total length is 1620 km.
- **NW-2:** Brahmaputra river in Assam, from Dhubri to Sadiya.
- **NW-3:** In Kerala, from Kottapuram to Kollam.
- **NW-4:** On the Godavari-Krishna river system in the South.
- **NW-5:** On the Mahanadi river near Odisha.
- **NW-6:** On the Barak river (Barak originates in Manipur hills).

Q13.The splitting of the ancient Indo-Brahma river into the Indus, Ganga, and Brahmaputra drainage systems is believed to have been primarily caused by which geological event?

NTPC Graduation CBT-01 2025-26 (16 Mar, 2026 Shift 1)

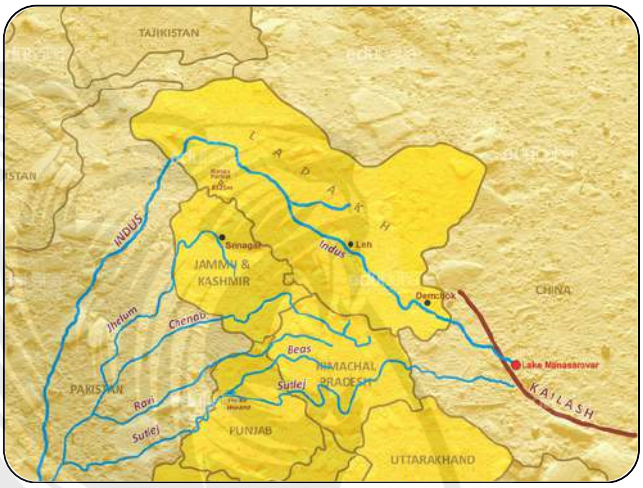

A. Pleistocene upheaval
B. River capture by erosion
C. Glacial melting
D. Volcanic eruptions

- This **split happened due to the Pleistocene Upheaval** when the Indian plate collided with the Eurasian plate.
- This collision resulted in the formation of the Himalayas (Trans, Great, Lesser, and Shiwaliks).

Q14.The Satluj, Beas, Ravi, Chenab and Jhelum merge into which river system near Mithankot?

NTPC Graduation CBT-01 2025-26 (24 Mar, 2026 Shift 3)

A. Godavari
B. Ganga
C. Brahmaputra
D. Indus

- **Jhelum**: Originates from Verinag. It supplies water to Wular Lake (India's largest freshwater lake; World's largest is Lake Superior). **Ancient name: Vitasta (or Vyath)**. Greek name: Hydaspes.
- **Chenab**: Originates from Bara-lacha la pass (as Chandra and Bhaga rivers meeting at Tandi). It is the largest tributary of the Indus. **Ancient name: Askini.**
- **Ravi**: Originates from Rohtang Pass. **Ancient name: Parushni.**
- **Beas**: Originates from Rohtang Pass. **Ancient name: Vipasa.** It merges with the Sutlej at Harike in India. From Harike, the Indira Gandhi Canal (**India's longest river canal, 837 km, 'Lifeline of Rajasthan') originates.**
- **Satluj**: Originates from Rakas Tal (Rakshastal) near Mansarovar. Enters India through Shipki La pass. **Ancient name: Shutudri.** In Tibet, it is called Langqen Zangbo (Elephant's mouth). It is the longest tributary of the Indus.

Q15.The statement 'Most of the major Peninsular rivers flow from west to east' is an EXCEPTION for:

NTPC Graduation CBT-01 2025-26 (24 Mar, 2026 Shift 3)

A. Godavari and Krishna
B. Kaveri and Krishna
C. Mahanadi and Kaveri
D. Narmada and Tapi

- **Most peninsular rivers flow West to East** because the Peninsular Plateau is tilted towards the East.
- **Narmada and Tapi flow East to West** because they flow through Rift Valleys (Bhransh Ghati).
  - **Narmada:** Flows between Vindhya range (top) and Satpura range (bottom). Originates from Amarkantak plateau (Maikal ranges). **Tributaries**: Shakkar, Halon, Tawa. Dam: Indira Sagar.
  - **Tapi**: Originates from Betul plateau (Satpura ranges, MP). **Tributaries**: Gomal, Arunavati, Aner, Bori. Dam: Ukai.

Q16.Durgapur Steel Plant of West Bengal is situated on the banks of which river?

A. Damodar
B. Teesta
C. Mahananda
D. Hooghly

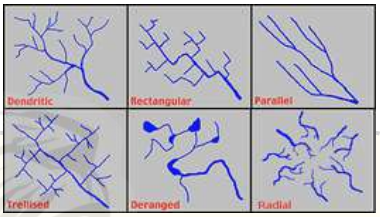

RRB NTPC UG CBT-01 2024 (04 Sept, 2025 Shift 2)

- **Damodar river** also flows through a rift valley in the Chota Nagpur Plateau and joins the Hooghly river.

Q17. Which river from the following originates from the Amarkantak Plateau?

A.Mahanadi
B. Ganga
C. Narmada
D. Tapti

RRB NTPC UG CBT-01 2024 (03 Sept, 2025 Shift 1)

- Mahanadi originates from Sihawa hills in Chhattisgarh.
- Tapti originates from Betul Plateau.
- **Amarkantak plateau exhibits a Radial Drainage Pattern** (rivers radiate outwards from a central dome/peak). Narmada and Son rivers originate here.
  - **Dendritic Pattern:** Resembles the branches of a tree (e.g., Himalayan rivers like Indus, Ganga).
  - **Trellis Pattern:** Secondary tributaries join the main river at right angles (90 degrees / perpendicular).
  - **Centripetal Pattern:** Rivers discharge their water into a central depression or lake.
    - **Example of Centripetal:** Loktak Lake in Manipur (Floating lake famous for Phumdis and the Sangai deer, state animal of Manipur. Keibul Lamjao is the floating National Park here).

Q18.Which of the following rivers flows through a small part of the Great Indian Desert?

A.Ravi
B. Mahanadi
C. Satluj
D. Luni

RRB NTPC UG CBT-01 2024 (28 Aug, 2025 Shift 2)

- **Luni is also known as Lavanavari (Salty river).**
- It becomes salty because the rate of evaporation is higher than the rate of precipitation.
- It disappears into the Rann of Kutch (Gujarat) because there isn't enough water to reach the sea.

Q19.Which of the following rivers is a peninsular river and flows eastward?

A. Sabarmati
B. Narmada
C. Tapti
D. Mahanadi

RRB NTPC UG CBT-01 2024 (11 Aug, 2025 Shift 2)

- Sabarmati, Narmada, and Tapti flow westward.
- Narmada (Indira sagar dam) is the longest west-flowing river, Tapti (Ukai dam) is second.
- **Mahanadi flows eastward.** Originates from Sihawa hills.
  - **Tributaries**: Ong, Jonk, Tel, Hasdeo, Mand, Ib.
  - **Longest** dam Hirakud is built on it.

Q20.Which of the following is a key river in the Thar Desert region?

A. Luni river
B. Yamuna river
C. Sutlej river
D. Ghaggar river

RRB NTPC Graduation CBT-01 2024 (23 Jun, 2025 Shift 2)

- **Ghaggar-Hakra** is a separate monsoon-fed river in the Pakistan-Punjab-Haryana region.

Q21. The Tapti River originates from which mountain range?

A. Satpura Range
B. Western Ghats
C. Aravalli Range
D. Vindhya Range

RRB NTPC Graduation CBT-01 2024 (13 Jun, 2025 Shift 3)

- **Tapti originates from the Betul plateau in the Satpura range.** (Trick: S for South, S for Satpura. Tapti is south of Narmada/Vindhya).

Q22. Which of the following is the largest Peninsular river?

A. Godavari
B. Narmada
C. Mahanadi
D. Kaveri

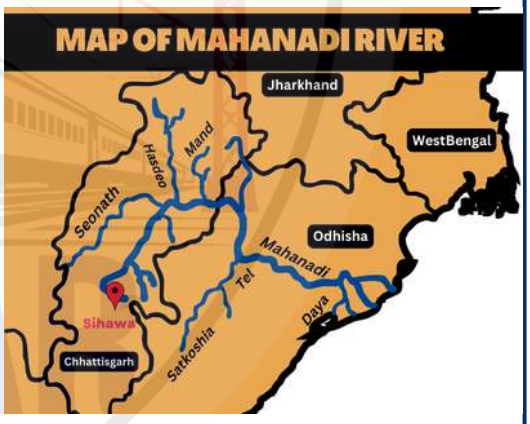

RRB NTPC Graduation CBT-01 2024 (14 Jun, 2025 Shift 2)

- **Godavari** is the largest peninsular river. It is also known as Dakshin Ganga or Budhi Ganga.
- **Originates from Trimbakeshwar** in the Sahyadri range (Western Ghats), Maharashtra.
- **Tributaries** of Godavari (Trick: MS, PPP, WW, I): Manjira, Sabari, Purna, Penganga, Pranhita, Wainganga, Wardha, Indravati.

Q23. Which of the following rivers is NOT a tributary of the Ganga but flows directly into the Bay of Bengal?

A. Ghaghara
B. Kosi
C. Gomti
D. Mahanadi

RRB NTPC Graduation CBT-01 2024 (05 Jun, 2025 Shift 2)

- **Mahanadi** is an independent river.
- Above Mahanadi there are the two rivers **Brahmani and Baitarani,** which are also independent rivers flowing into the Bay of Bengal.
- **Subarnarekha** is another independent river above Brahmani.

- **Rushikulya river** is a small river above Mahanadi, famous for the mass nesting (Arribada) of Olive Ridley Turtles. (Turtle gender depends on temperature during incubation: high temp = female, low temp = male).

Q24. Which of the following Indian rivers is famous for its 'badland topography'?

A. Chambal
B. Ken
C. Ramganga
D. Gandak

NTPC UG CBT-01 2025-26 (17 Jun, 2026 (4:30 PM - 6:00 PM)

- **Chambal creates "Gully erosion"** which leads to the formation of ravines (Beehad).
- This results in Badland Topography where cultivation is not possible.

Q25. Krishna Basin mainly extends over which of the following groups of states?

NTPC UG CBT-01 2025-26 (08 May, 2026 (12:45 PM - 2:15 PM)

A. Maharashtra, Madhya Pradesh and Chhattisgarh
B. Maharashtra, Karnataka and Andhra Pradesh
C. Maharashtra, Odisha and Karnataka
D. Maharashtra, Gujarat and Madhya Pradesh

- **Krishna River originates from Mahabaleshwar** in Maharashtra.
  - **Tributaries** of Krishna (Trick: Bhim, Tungabhadra, Musi, Koyna, Ghatprabha, Malprabha, Dudhganga).
- It **flows through Maharashtra, Karnataka**, and **Andhra Pradesh**.

Q26. Which of the following rivers of India forms a delta on the eastern coastal plains?

NTPC Graduation CBT-01 2025-26 (27 Mar, 2026 Shift 2)

A. Narmada
B. Mahi
C. Godavari
D. Tapi

- **East-flowing rivers** form Deltas on the eastern coast.
- **West-flowing rivers** (like Narmada, Tapi, Mandovi & Zuari in Goa, Periyar & Bharathappuzha in Kerala) form Estuaries (Jwar-nad-mukh) because their course is short and they flow in rift valleys carrying less silt.

- **Cauvery River :** Originates from Talakaveri in the Brahmagiri ranges of Kodagu district, Karnataka.
  - **Tributaries of Cauvery:** Kabini, Bhavani, Hemavati, Amaravati, Shimsha. (Trick: Many have 'ni' or 'ti' at the end, but Indravati is of Godavari).

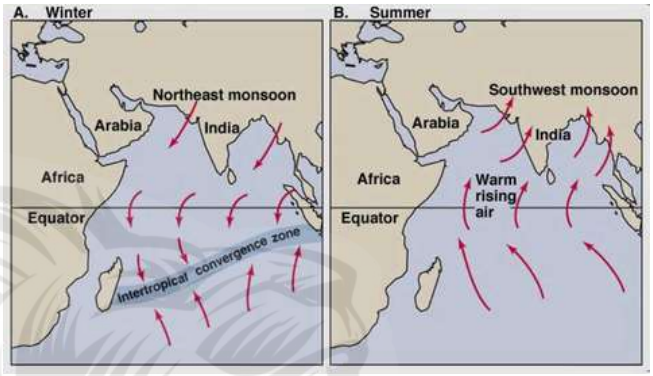

MONSOON

- The term **"Monsoon" is derived from the Arabic word "Mausim"** meaning seasonal reversal of winds.
- In **May/June, the Tibetan Plateau becomes intensely heated,** creating low pressure. This causes air to rise, forming the Tropical Easterly Jet Stream.
  - This jet stream creates a "Monsoon Trough" (a vacuum/low pressure zone) over India.
- **The South-East trade winds** crossing the equator get deflected to the right due to the **Coriolis Force (Ferrel's Law)** and enter India as the South-West Monsoon. (Coriolis force is zero at the equator and maximum at the poles).
  - A high-pressure zone called **"Mascarene High" near Madagascar** pushes the winds strongly toward the Indian low-pressure zone.

Q27. Which branch of the monsoon brings rainfall to India's Western Coast?

NTPC UG CBT-01 2025-26 (14 Jun, 2026 (9:00 AM - 10:30 AM)

A. South-West Monsoon Arabian Sea branch
B. North-East Monsoon
C. Western Disturbances
D. South-West Monsoon Bay of Bengal branch

- The **South-West Monsoon splits into two branches:**
  - **The Arabian Sea Branch** hits the Western Ghats and brings rain to the western coast. **It further divides into three sub-branches** (one hits the Ghats, one goes parallel to Narmada, one goes parallel to Aravallis).
  - **The Bay of Bengal Branch** hits the Meghalaya Plateau (Garo, Khasi, Jaintia hills). Mawsynram in the Khasi hills receives the highest rainfall in the world. The branch then deflects towards the Northern plains.
- **Both branches eventually meet in the Punjab plains.**
- **Burst of Monsoon:** Sudden onset of heavy rainfall.
- **Break in Monsoon:** Dry spell where it rains for a few days and stops for a week or two.

Q28. Which of the following wind systems is primarily responsible for the rainfall over the Coromandel coast during the winter season?

NTPC UG CBT-01 2025-26 (07 May, 2026 (4:30 PM - 6:00 PM)

A. Western disturbances
B. Westerlies
C. Northeast monsoon winds
D. Southwest monsoon winds

- As winter approaches, the sun moves southwards, creating low pressure over the Indian Ocean and relatively high pressure over land.
- The **monsoon withdrawal begins from the North-West part of India.**
- As winds blow from land to sea, they deflect and become the **North-East Monsoon** (or Retreating Monsoon).
  - These winds pick up moisture from the Bay of Bengal and cause **rainfall on the Coromandel coast (Tamil Nadu) in winter.**
- **Winter Rainfall in Northern India:** Caused by Western Disturbances originating from the Mediterranean Sea, brought by Jet Streams. This rain is called "**Mahawat**" locally in Rajasthan and is beneficial for Rabi crops (like wheat).

Q29. The period of southwest monsoon season in India is:

NTPC Graduation CBT-01 2025-26 (22 Mar, 2026 Shift 2)

A. May to September
B. June to November
C. June to September
D. July to December

- **Enters India in the first week of June.** Covers the whole country by mid-July. Begins withdrawing in September.
- **October Heat:** The period of oppressive, humid heat in October when clouds clear up after the monsoon, and the sun evaporates the remaining moisture.

Q30. Why did nearly 19% of India face drought or drought-like conditions by August 2025 despite earlier heavy rains?

NTPC Graduation CBT-01 2025-26 (22 Mar, 2026 Shift 2)

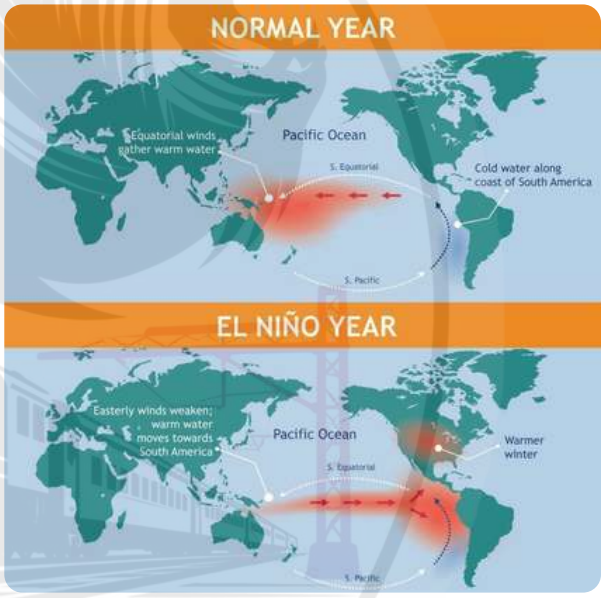

A. A sharp reversal led to severe rainfall deficits in many regions.
B. Excessive river damming caused water shortages.
C. Unusually high temperatures reduced rainfall.
D. Monsoon onset was delayed across all states.

Q31. A rise in the sea surface temperature in the Pacific Ocean accompanied by deficient rainfall in India is associated with which of the following phenomena?

NTPC Graduation CBT-01 2025-26 (19 Mar, 2026 Shift 3)

A. Sa Nina
B. El Nino
C. Chi Nina
D. Pro Nino

- **El Nino (Child Christ):** Occurs every 3-7 years when the trade winds weaken. Warm water accumulates near the Peruvian coast. It suppresses the upwelling of cold water and phytoplankton, ruining fishing zones. It causes low/delayed rainfall in India and Australia.
- **La Nina:** Opposite of El Nino. Trade winds are stronger, bringing more cold water upwelling and causing above-normal, early rainfall in India/Australia, which is favorable.

Q32. Which of the following monsoon systems is also known as the retreating monsoon?

NTPC Graduation CBT-01 2025-26 (17 Mar, 2026 Shift 2)

A. Advancing Monsoon
B. Western Disturbances
C. Northeast Monsoon
D. Southwest Monsoon

Q33. What is the primary reason for the intensification of the monsoon trough over North India by the end of May?

NTPC Graduation CBT-01 2025-26 (25 Mar, 2026 Shift 1)

A. Shift in wind patterns
B. Decrease in humidity
C. Increase in atmospheric pressure
D. High temperature in the region

Q34. Which of the following places may receive an amount of rainfall in a single day that is equal to 10 years of rainfall at Jaisalmer?

RRB NTPC UG CBT-01 2024 (01 Sept, 2025 Shift 3)

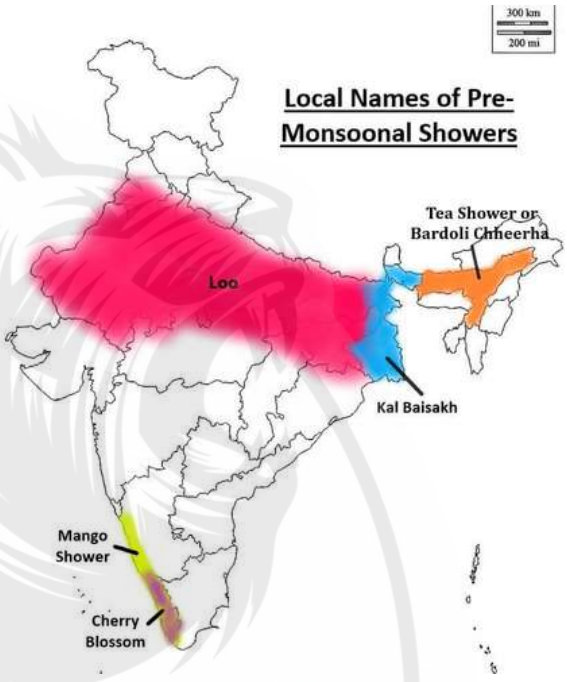

A. Tura
B. Leh
C. Asansol
D. Siliguri

- **Tura is located in the Khasi Hills in Meghalaya** (same region as Mawsynram).
- Due to the funneling effect of the hills, the area receives massive concentrated rainfall ("Cloudburst").

Q35. 'Blossom Shower' triggers the blossoming of the flowers of which crops in Kerala and nearby areas?

RRB NTPC UG CBT-01 2024 (21 Aug, 2025 Shift 1)

A. Tea
B. Coffee
C. Sunflower
D. Cotton

- **Pre-monsoon showers occur before the actual monsoon arrives (in May).**
  - In **West Bengal,** they are called **Kal Baisakhi** (Calamity of Baisakh) - good for Jute cultivation.
  - In **Assam**, they are called **Bordoisila**.
  - In Kerala and **Coastal Karnataka,** they are known as **Mango Showers** (helps in the ripening of mangoes) and **Blossom Showers (helps in the blossoming of Coffee flowers).**
    - **Coffee varieties in Karnataka:** Arabica, Liberica, Robusta.

Q36. Which term refers to the pre-monsoon showers that occur with a sudden rise in temperature, especially in southern India?

RRB NTPC UG CBT-01 2024 (07 Aug, 2025 Shift 2)

A. Nor'wester
B. Mango showers
C. Break in monsoon
D. Loo

- **Loo**: Dry, hot winds in North India caused by horizontal transfer of heat (Advection). They don't bring rain.
- **Pre-monsoon showers** in South India are Mango Showers / Blossom Showers.

Q37. Which region in India is known for experiencing 'Norwesters' during the pre-monsoon season?

RRB NTPC Graduation CBT-01 2024 (24 Jun, 2025 Shift 2)

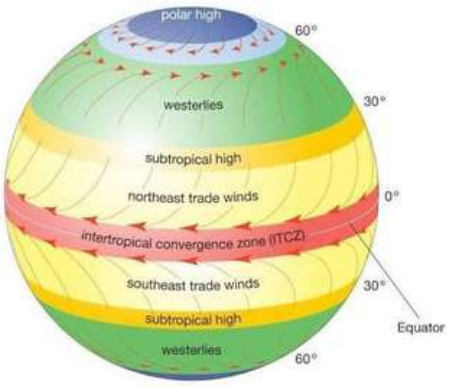

A. Southern India
B. Northern India
C. Western India
D. Eastern India

Q38. The subtropical jet stream plays a critical role in the withdrawal of the monsoon by which of the following?

RRB NTPC Graduation CBT-01 2024 (12 Jun, 2025 Shift 3)

A. Intensifying the ITCZ
B. Replacing tropical easterlies
C. Inducing subsidence over land
D. Triggering cold air advection

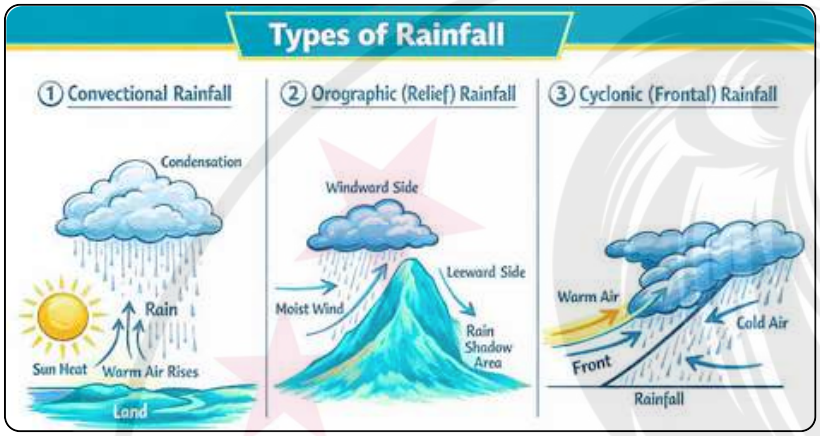

- **As the ITCZ moves south with the sun**, the Tropical Easterlies weaken/disappear, and subsidence of air causes high pressure over land, pushing the monsoon back.

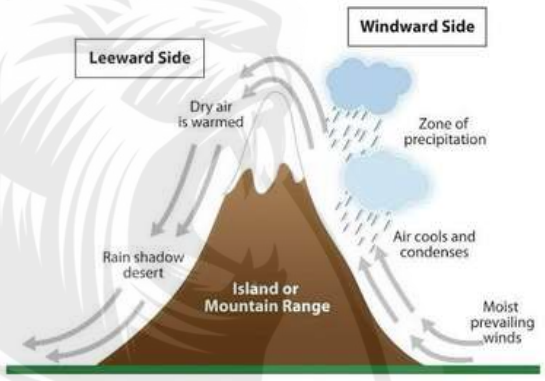

Q39. Which of the following cities is located in a rain-shadow region in India?

RRB NTPC Graduation CBT-01 2024 (12 Jun 2025 Shift 1)

A. Shillong
B. Cochin
C. Pune
D. Goa

- **Orographic/Relief Rainfall:** Moisture-laden air hits a mountain, rises, cools, reaches dew point, and rains heavily on the wind-facing side **(Windward side).**
- **As the air descends on the other side,** it loses its moisture, resulting in little to no rain. This dry area is the **Leeward side or Rain Shadow area.**
  - **Mumbai is on the windward side of the Western Ghats (heavy rain)**, while Pune falls on the leeward side (rain shadow area).
  - **Thar Desert is also a rain shadow** area because the Arabian Sea branch runs parallel to the Aravallis, and the Bay of Bengal branch loses its moisture by the time it reaches there.

Q40. Which of the following physiographic regions of India receives average annual rainfall of more than 200 cm?

NTPC UG CBT-01 2025-26 (20 Jun, 2026 (4:30 PM - 6:00 PM)

A. Western Ghats
B. Thar Desert
C. Interior Deccan Plateau
D. Ladakh region

- Ladakh is a cold desert. Thar is a hot desert.
- Western Ghats receive heavy rainfall (more than 200 cm) and therefore have Evergreen Forests.

- **Important Hills of Western Ghats:** Nilgiri, Anaimalai, Cardamom.
- **Highest peak in Nilgiri is Doddabetta** (Tamil Nadu).
- **Highest peak in Anaimalai** (and South India) is Anamudi (2695 meters).

- **Penner River:** An East-flowing river in Andhra Pradesh. The Somasila Dam is built on it. Do not confuse it with Periyar (which is West-flowing in Kerala).
- **Vaigai River:** The southernmost East-flowing river in India.
